V94: ENGINEERED FOR DYNAMIC RECREATION

FOOTPRINT **94X94X36"**	CAPACITY **7 ADULTS**
HYDRO-FLOW **320 GPM**	WATER VOLUME **420 GAL**
WEIGHT (FULL) **4403 LBS**	ELECTRICAL **50A CONFIG**

DESIGN CONSIDERATION

The V94's generous, open-concept seating maximizes social interaction and dynamic movement among multiple users, intentionally prioritizing flexible communal enjoyment over the singular, fixed deep recline of a dedicated lounge position.

THERAPY OBJECTIVE

"Velocity-optimized hydrotherapy focused on precise control and high-volume flow for targeted recovery."

EXPERT REASONING

- Highly optimized 7-seat configuration aligns with your 6-person capacity goal.
- Premium component selection and build quality match your requirement for long-term luxury durability.
- High-end structural investment matches your target for a flagship-tier ownership experience.
- Specialized features and configuration are purpose-built for recreational utility.

AI SYNTHESIZED BLUEPRINT

HYDROTHERAPY & WELLNESS

The V94's hydrotherapy system is meticulously engineered to align with your focus on lower-back relief and medium intensity. Our proprietary V-O-L-T™ (Vector-Optimized Laminar

Therapy) system, powered by an impressive 320 GPM pump flow, delivers massive volumes of water at a lower, more comfortable pressure. This High-Flow Therapy, channeled through 40 precision Jetpods and the powerful Whitewater-4™ jet, ensures a deep-tissue massage without the 'sting' often associated with traditional high-pressure jets. The strategically placed Jetpods specifically target lumbar regions, providing comprehensive and adaptable relief, perfectly matching your desired therapeutic experience for everyday recreation.

CLIMATE & SURROUNDINGS

The V94's structural integrity is paramount for long-term performance, especially when considering its placement on a deck in a mild, temperate zone like Victoria, BC. Our advanced Icynene foam insulation, meticulously applied over all plumbing, forms a robust thermal envelope. This engineering choice is critical for minimizing heat loss to the ambient environment, ensuring that the 420-gallon water capacity maintains its therapeutic temperature efficiently. This design directly translates to reduced energy consumption and consistent operational costs, providing reliable performance year-round even with afternoon sun exposure.

DESIGN & CAPACITY

As a flagship model in our luxury-tier Vector21 Series, the V94’s design principles are rooted in elegance and practicality, ideal for your aesthetic and capacity needs. Its generous 94-inch square footprint provides ample room for up to seven individuals, comfortably accommodating your requirement for six while offering additional space for dynamic social interaction on your deck. The choice of cabinet and shell finishes, from the earthy Barnwood or Chestnut to the vibrant Tuscan Sun or Alba shell colors, allows for seamless integration into a tropical aesthetic, enhancing your outdoor living space. The V94’s 900 lbs dry weight is engineered to be a manageable structural load for typical deck installations, ensuring stability and longevity for your chosen placement.

POWER & MAINTENANCE

For an ownership experience that prioritizes an upgrade in enjoyment with hands-on control, the V94 excels in operational efficiency and water management. Our advanced ConstantClean+™ system purifies the 420 gallons of water up to 51 times daily through high-flow filtration and integrated sanitation, significantly reducing the need for extensive manual maintenance. This automated precision ensures crystal-clear water with minimal intervention, allowing your 'hands-on' preference to focus on fine-tuning your therapeutic experience rather than tedious upkeep. The 240V electrical configuration is fundamental for delivering robust power to the dual-speed pumps, ensuring optimal jet performance and efficient heating, aligning with your desire for a premium, reliable hot tub experience.
